Portfolio: <https://chiragvadhavanaportfolio.vercel.app/>

As a MERN and JavaScript developer, I build dynamic web applications with MongoDB, Express.js, React, Next.JS and Node.JS. I specialize in creating scalable backends, intuitive front-ends, and optimizing performance. My experience at iFlair Web Technologies refined my skills in modern development, teamwork, and problem-solving.

Work Experience

Mern Stack Developer - Onsite

3 Years

[iFlair Web Technologies Pvt. Ltd.](#) | Ahmedabad, India

Javascript Developer - Remote

8 Months

[Techvein IT Solutions Pvt. Ltd.](#) | Jaipur, India

Projects

Zuno AI - Full Stack SaaS Platform

- Built a full-stack web application with separate User and Admin panels, supporting secure authentication, payments, and AI-powered features..
- Implemented user registration with email verification, followed by MFA (Multi-Factor Authentication) to enhance account security.
- Integrated a local LLM using Ollama to enable AI-based text generation without relying on third-party cloud AI services.
- Developed a subscription and payment system using Stripe/Razorpay, allowing users to purchase plans and manage billing.
- Designed an Admin Dashboard to monitor users, view payment transactions, and track platform activity through analytics and charts.
- Built reusable, responsive UI components and interactive dashboards for an optimized user experience. Managed database schema, migrations, and secure password handling with Prisma and PostgreSQL.
- **My role** Led end-to-end development of the project, handling frontend, backend APIs, authentication, payments, AI integration, and admin dashboards.
- **Technologies** - Next.JS, React, TypeScript, Tailwind CSS, Prisma ORM, PostgreSQL, Stripe/Razorpay, Ollama (Local LLM), Zustand, Framer Motion.

Meteri Wine Management Portal

- Enabled restaurants to independently create, customize, and manage their dishes, menus, wine lists, and beverage offerings, making them fully self-reliant on the platform.
- Architected and implemented a role-based access control (RBAC) system supporting multiple user roles (Admin, Restaurant, Client), ensuring secure and permission-driven access across the application.
- WineList Module: Allows restaurants to curate and group wine recommendations tailored for specific customer segments and dining preferences.
- MenuList Module: Structures restaurant menus into well-defined courses such as Starters, Mains, and Desserts for improved clarity and user experience.
- Beverage Module: Manages additional drink offerings including soft drinks and non-alcoholic beverages alongside primary menus.
- **My role** in this project is Led frontend development for a comprehensive wine and restaurant management system built from scratch, delivering three major interfaces: Admin Panel, Restaurant Panel, and Client View.
- **Technologies** - React.JS ,Tailwind CSS, and Axios for handling APIs and other react packages.

ERP School Management Portal

- Contributed to the development of a scalable ERP portal designed to streamline operations for schools and campuses.
- Built intuitive interfaces enabling Admins to onboard new schools or campuses and manage their full academic lifecycle.
- Designed flexible UI to support multi-tenant architecture allowing each school to function independently within the system.
- **My role** in this project involved creating the frontend solution console, adding functionalities, and creating a separate build for production
- **Technologies** - NextJS, Tailwind CSS, RTK, Sagas, Persist, antD and Axios for handling APIs and other react packages.

The Experimental Brain

- The Experimental Brain project involves developing an AI chat application using the ChatGPT API. This application allows school students to log in and access a wealth of knowledge, including learning from images. By leveraging advanced AI capabilities, the platform provides an interactive and engaging way for students to enhance their learning experience and gain information on various subjects.
- **My role** in this project involved fixing major bugs, such as implementing stop response functionality, adding login and signup features, and managing student details. Additionally, I handled server deployment for both the frontend and backend components and managed domain hosting. Built the complete student authentication module in Node.js, including user registration, login, token handling, and role-based access control.
- **Technologies** - React.JS , Express.JS, Node.JS, Less CSS, React Context API and Open AI API.

Education

Hashmukh Goswami College Of Engineering (GTU)	Jul 2019 - Jul 2022
Bachelor Of Engineering In Information Technology, Ahmedabad	CGPA 7.45
R.C Technical Institute (GTU)	Jul 2016 - Jul 2019
Diploma Engineering In Information Technology, Ahmedabad	CGPA 7.01
Shriji Vidhyalaya (GSHSEB)	Jun 2015 - May 2016
SSC Ahmedabad	69%

Skills

- **Libraries & Frameworks** : HTML, CSS, SCSS, LESS, Bootstrap, Tailwind, Javascript, Typescript, NodeJS, ExpressJS, ReactJS, NextJS
- **Technologies & Tools** : Git, GitHub, Redux Tool Kit, Context API, Firebase, Jira, Postman, Insomnia, Axios
- **Cloud** : AWS Microservices (Lambda, S3, Route53)
- **Databases & APIs** : MongoDB, MYSQL, PostgreSQL GraphQL, Rest APIs
- **Server Deployment** : Docker, Kubernetes, CI-CD PipeLine, Automation Scripts
- **AI & Automation Tools** : Open AI / Gemini Apis, Github Copilot, Cursor AI, Antigravity AI, Ollama
- **Additional Skills** : Performance Optimization, Touch Typing

Certificates

- iFlair Web Technologies Pvt. Ltd.
MERN Intership/training
- BrainyBeams Technology
NODE JS Workshop
- BrainyBeams Technology
PYTHON Programming Course

Languages

English, Gujarati, Hindi
